

Executive Summary

Fixed income experienced a strong first quarter driven by a downward move in the Treasury yield curve. Inflation trended downward during the quarter while short- and long-term inflation expectations rose, pushed up by the unknown and potentially far-reaching impacts of future tariff policies. Markets that entered 2025 with a risk-on attitude faced much uncertainty amidst various policy developments and reduced growth expectations. The Federal Reserve (“the Fed”) did not reduce rates throughout the quarter, holding the upper bound steady at 4.50%. Markets priced in a slightly quicker pace of rate reductions through the end of the year, primarily due to concerns of a weakening economy. Against this backdrop, the Victory Core Bond Fund (A Shares, without sales charge) underperformed its benchmark, the Bloomberg U.S. Aggregate Bond Index, for the quarter ended March 31, 2025.

Market Update & Commentary

At the beginning of the quarter, risk markets were priced to perfection – both fixed income and equity valuations were extended and pricing in a benign environment. While credit spreads remained below long-term averages for the majority of the quarter, we saw movement in response to uncertainty surrounding potential trade wars, higher inflation expectations, and slower growth forecasts toward the end of March. Yields moved down throughout Q1; long-term yields decreased more relative to the front of the curve in the middle of the quarter as investors sought to balance weaker economic data and a slight increase in inflation. Come March, the front end of the curve decreased as well, due (in our view) to markets pricing in a quicker pace of rate cuts. The 10-year U.S. Treasury yield began the quarter at 4.7% and concluded at 4.2%.

Forecasting rate cuts took a back seat in the news cycle amidst rising volatility. The VIX Index rose steadily throughout the quarter, most notably in March as market participants’ concerns surrounding future U.S. trade policy increased. The YoY Consumer Price Index (CPI) decreased throughout the quarter from 2.9% to 2.4%, while the unemployment rate increased from 4.1% at the end of 2024 to 4.2% at the end of Q1. While there were improvements seen on the inflation front, the focus of many market participants turned to the aggressive approach the Trump administration outlined to address trade deficits and more protectionist policies. Considering the material number of unknowns faced by markets, the Fed did not reduce rates throughout the quarter and has emphasized their “wait and see” approach to future monetary policy decisions. Short- and long-term inflation expectations rose, and consumer and business confidence dropped during the quarter, which may pose a threat to U.S. exceptionalism in the markets. However, between the swell in volatility and risk asset sell-off in mid-March, fixed income reclaimed its role as both an income generator and a valuable diversifier to equity risk.

Source: Bloomberg

Investor compensation for adding credit risk improved throughout the quarter but remained below average, which in our view showed that investors were pricing in a generally optimistic, but very narrow outlook. While fixed income yields lowered, driving positive returns across asset classes for the quarter, the real yields on offer and diversification benefits provide an attractive opportunity for fixed income investors seeking a cushion against potential volatility. The Bloomberg U.S. Aggregate Bond Index concluded the quarter at +2.8%.

* A basis point is one-hundredth of a percentage point (0.01%) and is abbreviated as “bp” (singular) or “bps” (plural).

Portfolio Performance & Positioning

During the quarter, the Fund increased its allocation to corporates and Treasury securities and reduced its exposure to asset-backed securities (ABS) and commercial mortgage-backed securities (CMBS). The Fund's duration remains in line with its benchmark.

All investing involves risk, including the potential loss of principal. In addition to the normal risks associated with investing, fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. Bonds and bond funds will decrease in value as interest rates rise and vice versa. Credit risk refers to the possibility that debt issuers may not be able to make principal and interest payments or may have their debt downgraded by ratings agencies. High yield securities may be more volatile, be subject to greater levels of credit or default risk, and may be less liquid and more difficult to sell at an advantageous time or price than higher-rated securities of similar maturity. Mortgage-backed securities (MBS) and asset-backed securities (ABS) are subject to credit, prepayment and extension risk and may react differently to changes in interest rates than other bonds. Small movements in interest rates may quickly and significantly reduce the value of certain MBS and ABS. The market value of a security issued on a when-issued, to-be-announced (TBA) or delayed-delivery basis may change before the delivery date, which may adversely impact the Fund's net asset value. There is also the risk that a party fails to deliver the security on time or at all. Derivatives may not work as intended and may result in losses. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. The Fund is also subject to liquidity risk, which is the risk that the Adviser may not be able to sell a security at an advantageous time or price, which may adversely affect the
